

# Fast. Efficient. Modern.

When the weather's right, it's important to take advantage of it. The Certa-Set™ Solid Set System allows you to water almost to blooming. When blooming time comes, you can start cutting immediately, without the need to relocate miles of pipe. Simply place the pipe in the guides and start cutting. As soon as the last bale is picked up you can get right back to irrigating and get across your field quickly.

## Why Certa-Set™?

### **NO MOVING PIPE, NO BORDERS**

With the Certa-Set™ system, you're able to grow and harvest every square inch of your field. NO MORE spraying your borders to keep the pipe clear. NO MORE costly labor to move pipe.

### **LEAK-FREE OPERATION**

NO MORE puddling. NO MORE ponding. NO MORE leaking. With North American Specialty Pipe patented Certa-Set™ sled coupling, you'll never lose another drop of water.

### **INSTANT STARTUP**

North American Specialty Pipe has partnered with Nelson Irrigation's Windfighter sprinkler and MRDC to ensure your system stays full and ready to irrigate at the flip of a switch. Nelson Irrigation has also developed a wireless valve to work directly with the Certa-Set™ system, allowing for remote access to your leak-free irrigation system.

### **MORE EFFICIENT**

Lower friction loss means lower pumping costs.

### **EASY MECHANIZATION**

Harvest "under the pipe" with available rollers. Retrieve the pipe at the end of the season with the AIM Retriever. The possibilities are endless.

### **MAXIMIZE SCHEDULING**

Schedule your sets to run even closer to the harvest to put down the right amount of water when you need it. After the last bale's up, give it a quick pass to get your field green again without drowning it.

### **KEEP IT OUT OF THE WAY**

Shallow-bury your main line to keep it out of the way, and retrieve it when you rotate out.
